

Electrician's Plaster

Rapid hardening gypsum, specially designed for plastering around electrical sockets and cables. For indoor use.

Type of use:

Electrician's Plaster is used for various types of application associated with electrical installations, such as plastering around sockets and cables. Also suitable for filling holes and wall plugs and for repairing edges or smoothing out uneven surfaces.

Material:

Electrician's Plaster is a rapid hardening, high-quality gypsum.

Subsurface:

The subsurface must be load-bearing, clean and free of dust and grease. Any loose, unbonded material must be removed. The subsurface must then be moistened.

Quantity required:

The quantity required varies depending on the type of application.

Processing and application:

Sprinkle the required amount of Electrician's Plaster into clean water (in a rubber container, for example) and mix using a trowel or spatula to produce a lump-free paste. Apply the mixture immediately using a trowel or float. Smooth out any transitions using a wet paintbrush. Never use Electrician's Plaster on surfaces that are exposed to moisture and never use together with products that contain cement. Do not carry out works at air and surface temperatures below +5 °C.

Processing and curing times:

The processing/working time at + 20 °C is approximately 15 minutes.

Storage:

Store appropriately in dry conditions.

Packaging:

5-kg bag

Note:

The technical details are valid at 20 °C and 65 % relative humidity. Observe the instructions printed on the sack.

The information provided is based on extensive tests and practical experience. It does not apply to every application situation. For this reason we recommend that you carry out a trial if necessary. Subject to technical alterations within the framework of further development. Our general terms and conditions apply.
