

## Deep Primer

Ready-to-use, coloured primer for improving the bond between the subsurface and the mortar and to strengthen the subsurface. For outdoor and indoor use.

### Types of application:

The deep primer is used to pretreat strongly absorbent surfaces in order to regulate their absorbency. Suitable surfaces for treatment are plaster, concrete, masonry and gypsum plasterboard. Slightly sanding or powdering surfaces are strengthened.

### Material:

The deep primer is solvent-free, coloured pale pink, quick-drying and permeable to water vapour. It is suitable for both indoor and outdoor applications.

### Subsurface:

The subsurface must be clean, dry, absorbent and dust-free. All traces of dirt, oil, grease, loose particles, old coatings and fillers must be removed. Glue-bound distemper must be washed off.

### Processing and application:

Apply the deep primer to the cleaned surfaces using a lamb's wool roller or broad brush. Allow the deep primer coat to dry completely before applying mortar to the surface.

Do not carry out works at air, material and surface temperatures below +5 °C.

### Quantity required:

Depending on the absorbency and properties of the subsurface, approximately 100 to 250 ml are required per square metre.

### Storage:

Store in dry conditions and in the original closed container.

### Packaging:

1-l tub  
2.5-l pail  
5-l pail

### Note:

The technical details are valid at 20 °C and 65 % relative humidity.

Observe the instructions on the packaging.

The information provided is based on extensive tests and practical experience. It does not apply to every application situation. For this reason we recommend that you carry out a trial if necessary. Subject to technical alterations within the framework of further development. Our general terms and conditions apply.
